

FIND THE PERFECT SOLUTION DELIVERED BY EXPERTS

ROTARY DRILL COMPONENTS

Too often, Sandvik sees rotary drills damaged or destroyed by inferior repairs or sub-standard replacement components. It does not have to be this way. Sandvik provides a spectrum of repair and replace solutions, making it easy to find the right service option for every part of your drill rigs: compressors, rotary heads, gear boxes, under carriages, and more.

No matter which option you choose, genuine Sandvik parts will provide better reliability and longer life than non-OEM alternatives. They are manufactured and installed by experienced engineers, with an unmatched knowledge of your drilling equipment. With the range of services available, you can always find the option that perfectly matches your equipment, your operation, your priorities, and your budget.

For example: Component Exchange is often the optimal way to deal with worn-out rotary heads. We exchange the rotary head on your rotary drill with an as-new Sandvik replacement.

Because they are remanufactured by Sandvik, you are assured that the rotary head is durable and effective, and engineered to the exact specifications of the drill rig. This service also provides a short turnaround time, at a lower price than buying a new rotary head.

WITH SANDVIK COMPONENT SOLUTIONS YOU'RE ASSURED OF:

- **High productivity** delivered by the highest quality OEM components
- **Reduced downtime** because of reliable and durable rotary drill parts
- Fewer breakdowns and fewer repairs **reduces injury risk for your workforce**
- **Short turnaround times**
- **6-month full warranty** on all Sandvik component solutions

ROTARY DRILL COMPONENTS — THE RIGHT SOLUTION FOR YOU

The right solution depends on many different factors – the age and condition of the components, as well as your company’s priorities and budget. Therefore Sandvik offers a range of approaches, all delivered with unmatched expertise and knowledge.

SOLUTIONS

KEY FEATURES

NEW

You’ll receive top-quality, long-lasting Sandvik components, ensuring higher productivity and maximum reliability.
